What's New in the?

Lithium browser is a web browser used on Unix-like systems, also available for Windows. Lithium Browser is based on the open source browser framework Gecko. The developers focus on improving the browsing experience and security. Browsing: Browsing is done via the HTML and CSS style sheets. Web pages are rendered to the screen as text and images, with no rendering of the graphics. This is done to eliminate the need for plug-ins to render the pages. General: Lithium browser is a browser with all the features needed to browse the World Wide Web. It includes over 400 (!) browser add-ons and extensions for Mozilla. General: Lithium's Bookmarks are stored in a database. This allows for easy synchronization between computers. The bookmarks can be organized into collections and sorted according to a variety of criteria. General: Bookmark collections can be exported as HTML files, and files can be imported from HTML and supported ZIP archives. General: Lithium browser implements a real-time spell checking engine that checks for misspelled words as you type them. General: Bookmarks can be bookmarked by dragging and dropping them to a bookmark folder. General: Bookmark folders can be organized in a variety of ways using the preferences dialog. General: Lithium browser makes it possible to translate web pages into other languages, including right-to-left languages. General: The preferences dialog provides users with the option to set the default search engine, set the location of the address bar, and choose between the "Bookmarks" folder and a "Sites" folder. General: When browsing, the browser can be set to automatically refresh the pages in the background. General: Bookmarks are stored in a database and can be restored from this database using the "Restore from file" option in the preferences dialog. General: Lithium can make use of other add-ons that it comes with. For example, it can use the CiteULike add-on to provide a citation tool. General: Users can choose to turn on the option to auto-reload web pages. General: Lithium can use a variety of proxy servers to change the IP address of the computer that you are accessing the Internet through. General: Lithium allows users to configure the interface in a variety of ways. For example, users can enable the use of "tabs," turn on the option to use a "tool bar," or use the "extensions" add-on to provide users with the ability to add functions to the browser. General: The interface uses the GTK+ 2 user interface library to provide users with a consistent look and feel on all the operating systems that it runs on. Security: Lithium Browser is a free and open
