[Ultrastructure of fetal neurons and glial cells in the brain and spinal cord of the chick and quail embryos]. The structure of the neural tissues of the spinal cord and brain of chick and quail embryos from the 2nd to the 12th day of development has been studied by electron microscopy. The formation of neurons from neuroblasts of the ventral and intermediate spinal cord is characterized by: 1) morphological rearrangement of the nucleolus, 2) nucleoplasmic filaments and heterochromatin formation, 3) occurrence of organelles in the cells and production of specific proteins. The neurons of the intermediate and dorsal spinal cord and the cerebral cortex are characterized by the existence of synapses and the production of neuropeptides and neurohormones. The types of glial cells of the spinal cord and brain were established. The functional role of glial cells is to maintain the homeostasis of the neuron. Some changes in the structure of the neurons in the cerebral cortex during the development in the chick embryos are described. The results are discussed in connection

with the early evoking and protective activity of the neurotrophic system and the reactivity of the neurons and glial cells during development in the vertebrate embryos. How do I add a column in listview? I am adding a column to my listview and I am doing the following: `public void addView(View v) { ViewGroup.LayoutParams p = newView.getLayoutParams(); p.height = 100; p.width = 100; p.width = doubleValue; v.setLayoutParams(p); v.setBackgroundColor(Color.RED); }` Is this the right way to do it? I have verified that the size is right but it does not seem to change anything on the screen.
