How does it work?

- InstallGuard is an app that has a small footprint (approx. 500 KB) and low demand of system resources (CPU, Memory)
- InstallGuard comes with a trigger, so the app will load only when it is appropriate to do so
- Once it runs, it works by detecting potentially unwanted applications (PUA)
- InstallGuard sends all detected apps to a server, which analyzes them and provides the user with a custom message along with link to a specific website.
- At the moment of writing this article, the app is available in 6 languages: English, Chinese, ChineseSimplified, German, French and Spanish.

Why should you download it?

- InstallGuard is a software utility that has a variety of settings for users of all levels and purposes
- Security is an important issue for everyone, which is why InstallGuard provides an in-app password so that it can be launched even if the user forgets to do so
- InstallGuard won't do anything against your security if you enable the password feature, and only notify the user when he or she forgets to change it
- Before you download the app from our website, please remember to read the terms and conditions to see if it fits with your needs

InstallGuard Crack+ Activation Code

InstallGuard Serial Key is a software utility whose purpose is to help individuals secure their operating environment, by blacklisting processes and monitor actions. Fast install and straightforward UI The installation process runs seamlessly and it is over in a few seconds, while the interface you come to meet encompasses a well-organized and clean environment. It consists of a navigation panel, a menu bar and several tabs which enable you to quickly access all available settings. It can be used with great ease by anybody, including people with little or no previous experience with the IT world. Moreover, it is non-obtrusive, as you can easily hide it to the system tray at any point. Password-protect the app You are required to input a password from the first launch, yet this is a useful feature, as it enhances security. In addition to that, you can take snapshots (a list of all installed apps) at a user-input number of minutes, and you can view details in a TXT or CSV format. Block processes and specific actions It is possible to create a blacklist of all processes that you do not want to run on your PC, as well as block new installations. A message alerting users can be created and saved, while you can also monitor particular locations on the hard drive (Desktop, Documents, Music, Internet cache), and delete any new file that is created. Disable system tools Last, but not least, you can restrict access to the Task Manager, Command Prompt and Registry Editor, and alert the user with a custom warning message. The detection performance can be controlled with the help of a slider bar and you can delete the entire database. ...
